Neurilemmoma of The Abdomen

Erni J. Nelwan*, Neni*, Andri Sanitiyoso**

Neurilemmoma is a benign tumor origin from the nerve, in certain conditions it is possible to transform into a malignant state. This pathological finding can be found anywhere in the body and in any age. Surgery is the treatment of choice, radiotherapy and chemotherapy can be considered in the malignant form.

A case of a 41-year-old man with neurilemmoma of the anterior abdomen was admitted in Internal Medicine ward to improve the general condition before performing surgery for the tumor.

The patient has been operated in Bangka twice, but in time the tumor is progresses and became infected. This is possibly a malignant form of neurilemmoma.

Before surgery we performed radiation and after the general status is optimal, the patient is operated. He is in a good condition and has returned to his home town.
